· POLYGON

Problem Statement

01 90% of retail traders LOSE money

Target: 50M+ retail traders globally lack institutional-grade tools. SEC & FCA data confirm consistent retail underperformance vs institutional desks.

02 \$24,000/yr — The Bloomberg Wall

Institutional intelligence costs \$24K/year. Real-time order flow, sentiment feeds, and liquidity maps are gated behind price walls retail traders cannot afford.

03 Lagging Indicators Are Broken

RSI, MACD, Bollinger Bands signal AFTER the market has moved. Institutions entered 10 candles ago. Retail traders are always structurally late.

04 Zero Transparency in AI Bots

Every trading AI claims 90%+ accuracy. None can be verified. All predictions are self-reported. There is no independent audit mechanism.

APEX TRADE AI — A Hybrid Intelligence OS

"We don't just predict — we prove it on-chain."

ANALYTICAL LAYER

The Brain

- XGBoost + LightGBM + LSTM + Transformer ensemble
- 84-feature canonical schema (Structure + Momentum + Liquidity)
- Meta-Learner routes to highest-performing model
- Half-Kelly position sizing + ATR-anchored stops

TRUST LAYER

The Notary — BVNI

- SHA-256 hash of every AI insight generated
- Anchored to Polygon Amoy Testnet via Solidity contract
- Public PolygonScan verification — anyone can verify
- First trading AI with cryptographically unfakeable results

VISUAL LAYER

The Cockpit

- TradingView Advanced Chart (OANDA:XAUUSD) live
- Glassmorphism fintech dashboard — Next.js 14
- Real-time heatmap, signal ranker, confidence bars
- News decay scores visible per event (USP)

Technical Approach

BACKEND / AI

- Python 3.10
- XGBoost · LightGBM · PyTorch
- LSTM + Transformer
- Platt Scaling (sklearn)
- pandas · numpy · ta-lib

BLOCKCHAIN / TRUST

- Solidity Smart Contract
- Web3.py
- Polygon Amoy Testnet
- SHA-256 Cryptography
- PolygonScan Public Verify

FRONTEND / UI

- Next.js 14 App Router
- TradingView Pro Widget
- Tailwind + Glassmorphism
- ApexContext (React)
- Framer Motion

GOOGLE TECH

- Google Cloud Run
- Vertex AI (model store)
- Gemini Pro (briefings)
- BigQuery (signal logs)
- Firebase (push alerts)

BACKTEST PROOF — LIVE MVP

DATA TRANSPARENCY: High win rates = extreme selectivity (3.66% coverage). System ignores 96.34% of bars — trades only peak-conviction setups.

ASSET	WIN RATE	ROI	N	STATUS
XAUUSD · 4H	95.7%	+166.5%	116	PRIMARY
GBPUSD · 4H	73.8%	+112.8%	355	PRIMARY
XAUUSD · 1H	99.5%	+85.5%	214	T>0.60
EURUSD · 1H	100%	+22.7%	37	n=37 ⚠
USDJPY · 1H	—	0.0%	0	SAFE MODE

Max Precision	Avg Precision	Coverage	F1-Score
1.00	0.80	3.66%	0.78

CHALLENGES & MITIGATION

- Overfitting to historical data

Purged K-Fold CV + walk-forward validation. Embargo period prevents leakage.
- MT5 feed interruption

Redundant yFinance fallback. 3-second TTL cache maintains dashboard continuity.
- Smart contract gas costs

Polygon Amoy Testnet = near-zero fees. Mainnet migration path ready for Phase 2.
- Regulatory uncertainty

Platform provides signals only — no auto-execution. User retains full trade authority.
- Low sample size (EURUSD 1H)

Flagged as preliminary (n=37). Excluded from primary claims pending more data.

Impact and Benefits
